Red Level Networks Joins FatPipe Networks Channel Partner Program

Novi, Michigan, March 30, 2009 – Red Level Networks announced today that it has joined the FatPipe Networks Channel Partner Program, effective March 19, 2009. Red Level Networks is now qualified to sell FatPipe Networks Wide Area Networks (WAN) solutions, featuring patented WAN redundancy technology, along with advanced high speed router clustering devices.

Based in Salt Lake City, Utah, FatPipe Networks line of products cover an array of features and benefits for companies that run mission critical applications over any type of WAN infrastructure. Customer benefits include up to seven-nines of WAN redundancy, reliability, and speed. Dynamic load balancing, Quality of Service (QoS), and additional security; as well as compression, and VPN encryption capability are also available. FatPipe ranked within the top quarter of Utah's fastest growing companies for the past three years in a row by MountainWest Venture Group's Utah 100, and was ranked 189th in the prestigious Inc. 500. FatPipe has received numerous awards and accolades for its innovative products and executive staff.

David King, Owner of Red Level Networks states, "In an over populated and cramped technology market place, we welcome selling a niche product like FatPipe. Its unique positioning in the market gives us a distinct advantage. This is one of the only products of its kind that will provide unquestionable reliability, redundancy, and speed for WAN/Internet connections for businesses. FatPipe's automatic multi vendor /multi speed WAN failover solutions gives us the opportunity to offer a dynamic solution to our customers who have become dependent on the internet to conduct business."

FatPipe's customer profiles are extremely diverse ranging from multinational corporations to medium and small sized companies. Companies worldwide deploy FatPipe appliances to help create robust and stable WAN infrastructures so they can transmit data accurately, efficiently and securely. All major industry types use FatPipe products including law firms, financial and medical institutions; local, state and federal government entities; military institutions, municipalities, utilities and educational facilities. In fact, FatPipe products are deployed at 16 of the top 100 hotels in the US and are used by 13 of the top 100 law firms.

Mr. King proclaims, "In business today maintaining connectivity is more vital than ever. A service interruption of any kind can disrupt operations; strain your company profits and perhaps its future. If you do not have a comprehensive disaster plan, including Internet redundancy, then you are leaving your company at serious risk. Recent news stories illustrate that no company is too large or small to be effected. Our customers are demanding this type of reliability and we are excited to be involved with FatPipe."

About Red Level Networks
